Annual Lockage Report 2025

The monitoring of lock operations across the Canal & River Trust network remains an essential element in our water resources management but also to understand the changing patterns in use of the 2,000 miles of waterways in our care. This report marks the 25th year of publishing an Annual Lockage Report, and covers the period January to December 2025.

Lockage can be defined simply as lock usage through the filling and emptying of a lock chamber, which in turn allows the movement of water and passage of boats. It is important to distinguish lockage from boat movements, which are the actual number of boats which travel through a lock. We have separated boat movements from lockage to acknowledge that averages can be skewed by the boat:lockage ratio (in the case of a typical broad lock, the ratio can be between one and four boats per lockful of water used). For this report, we have based the lockage analysis of each of our operational Regions on those sites with complete records for both 2024 and 2025 (known as the comparison sites). The number of comparison sites included in the 2024 report was 147, this year this value has increased to 152. In the appendix we have included, for information only, those sites where the data was of insufficient quality for 2024 and/or 2025, and therefore could not be used for the year-to-year comparisons.

The reasons for variations across the different regions and individual locks are numerous and complex. Most importantly, 2025 saw the Trust experience the most challenging drought conditions for a generation, with around 20% of the network (by length) closed to navigation at the peak of the drought, due to severe water shortages. It was the driest Spring on record in England, followed by the warmest and sunniest Summer on record, with four heatwaves and the year overall saw seven consecutive months (February to August) of below average rainfall. Nationally, the total comparable *recorded* lockage in 2025 was around 12% lower than in 2024. The busiest site recorded was Lock 2, New Marton on the Llangollen Canal, which saw a total of 7,035 in 2025. This was a 4% increase compared with 2024. Lock 21 Colwich, which was the busiest site for 2024, was the next busiest lock with 6,034 lockages, although it saw a decrease of 13% from the previous year.

The report contains the following: a summary table ranking the Regions by average annual lock counts for 2025, a map showing the restrictions at the height of drought (August 2025), a map showing the approximate distribution of lockage across the network (interpolated from the nearest lock counter data), maps showing the percentage and actual change in recorded lockage across the network from 2024 to 2025, a table of the 2025 lockage data, ranked from the busiest lock to the least busy, to allow easy identification of where a lock sits nationally in terms of its usage and then detailed reports of lockage and boat movements for the comparison sites within each Region for the last three years, separated into the individual canals within the Region.

I trust you find this report informative. If you have any queries, or would like to see the data in a different format or for a specific purpose, please contact us via email at water.information@canalrivertrust.org.uk

Appendix

Incomplete Data Sites 2025

For lockage data sites to be included in the main body of the report, the sites are required to be operational and have a good quality of data for both 2024 and 2025 (the comparison years). Incomplete sites within this Appendix are primarily those lockage sites where data was of insufficient quality for 2024 and/or 2025.

Region:

East Midlands

Canal:

Grand Union

Site	Type	NGR	Annual Lockage Totals			Comments
			2023	2024	2025
